Objective

Seeking full-time Software Development Engineer positions — full-stack or generalist. Interested in teams where engineers work across the stack, own features from design through deployment, and contribute to product direction.

Education

Georgia Institute of Technology August 2025 – Present
Master of Science in Computer Science (GPA: 3.75/4.0) Atlanta, GA
• **Relevant coursework:** Software Architecture & Design; Computer Networks; Operating Systems; Information Security

Seattle University September 2022 – June 2024
Bachelor of Science in Computer Science (GPA: 3.615/4.00) Seattle, WA
• **Relevant coursework:** Data Structures and Algorithms (C++), Computer Architecture, Operating Systems, Software as a Service (Full-stack), Mobile Development (Flutter), User Experience, Big Data Analytics

Experience

MyStage Music April 2025 – Present
Software Engineer Remote (Wisconsin-based)
• **Full-stack ownership:** Early-stage Web3 music startup; sole backend engineer responsible for Firebase database architecture, Python APIs (Firebase Functions), and React admin interfaces for a platform connecting music creators and festival audiences.
• **Festival delivery & Geo-NFT:** Designed and implemented concert NFT distribution using Google Maps/Geolocation APIs with proximity-based rules; built data synchronization between application state and blockchain records; delivered production infrastructure for a major music festival with **300,000+** attendees.
• **Admin platform:** Built a scheduled-tasks management system end-to-end — designed Pydantic data models, implemented CRUD APIs on Firebase Functions, developed a React admin UI with data grid, form validation, and bulk operations; wrote a **10+**-scenario test suite covering edge cases and large-batch Firestore processing.
• **Frontend features & integrations:** Built notification badge systems using stream queries to reduce Firestore overhead; developed sticker collections UI with TanStack Query and lazy-loaded JSON viewer; integrated GoHighLevel CRM for automated contact sync and tag management.

Future Arts September 2023 – June 2024
Software Engineer Seattle, WA
• **Automated pipeline:** Designed and shipped a web scraping and data processing system for an arts NGO using AWS serverless (Lambda, S3, API Gateway, EventBridge, Step Functions), Python (BeautifulSoup, Requests), and spaCy NLP to extract and structure artist information across diverse sites.
• **Data normalization:** Built an end-to-end ingestion and cleaning pipeline for multi-source, multi-format data from artist sites and social platforms; deployed as a scheduled workflow on AWS.
• **Outcomes:** Increased artist information accuracy to **80–90%**, reduced manual data entry by **~80%**, and lowered infrastructure costs by **~70%** via pay-per-use AWS Lambda.
• **Integrations:** Connected Airtable as the system of record and exposed APIs for downstream tools; documented architecture and delivered demos to non-technical stakeholders.

Bilimetrix USA June 2023 – August 2023
Software Engineer Intern Seattle, WA
• **System improvements:** Contributed to a C# .NET web application (Razor Pages) for medical image judging; implemented image-processing checks for rotation, color balance, and brightness to improve assessment accuracy.
• **UI redesign:** Built dynamic components to enhance the judging interface; improved accessibility and cross-browser compatibility.
• **Results:** Helped redesign data models (*ImageSeverity*, *ResultImage*) and refactor the testing suite to improve organization and remove redundancy; achieved **100%** unit test coverage, made **20+** commits, and reduced page load time by **30%**.

Technical Skills

Languages: Python, C++, C#, Java, JavaScript, TypeScript, Dart, SQL (MySQL)
Frameworks/Tools: React, Firebase (Firestore, Functions), AWS (Lambda, S3, API Gateway, EventBridge, Step Functions), Node.js, Angular, ASP.NET Core, Express, Flutter, Bootstrap, Docker, Git, Google Maps Platform, Blockchain (NFT)
Data Platforms: MongoDB, Spark, Hadoop, Hive, Airtable
